

Experiment 26: Clone an Existing GitHub Repository and Modify a File

Aim

To clone an existing GitHub repository, make a small change to a file, and save the changes.

Tools Required

- Git
- GitHub
- VS Code (or any text editor)

Procedure

Step 1: Choose a Repository

- Select an existing public GitHub repository.

Screenshot: Repository page.

Step 2: Clone the Repository

Bash

```
git clone <repository-url>
```

```
cd <repository-name>
```

Screenshot: Repository cloned.

```
srinidhi@Srinidhis-Laptop ~ % cd desktop
srinidhi@Srinidhis-Laptop desktop % git clone https://github.com/Sriarevalagan23/Test-repo-fork
Cloning into 'Test-repo-fork'...
remote: Enumerating objects: 79, done.
remote: Counting objects: 100% (79/79), done.
remote: Compressing objects: 100% (68/68), done.
remote: Total 79 (delta 5), reused 76 (delta 5), pack-reused 0 (from 0)
Receiving objects: 100% (79/79), 1.41 MiB | 132.00 KiB/s, done.
Resolving deltas: 100% (5/5), done.
srinidhi@Srinidhis-Laptop desktop % cd test-repo-fork
srinidhi@Srinidhis-Laptop test-repo-fork %
```

Step 3: Open a File

- Open any file (e.g., README.md) in a code editor.

Screenshot: File opened.

Step 4: Make a Small Change

- Modify a line of text or correct a typo.
- Save the file.

Screenshot: Updated file.

Result

Successfully cloned a GitHub repository, modified a file, and saved the changes.
